List of material for the final project

MTEC 2250

Prof. Rodriguez

1. OLED screen— This screen will display the rules of the games and show where the pitch is coming from or a basketball hoop where the user need to shoot the ball.
2. Gyroscope— This will help the user will see the output of basic angels and physics to play both baseball and basketball. This sensor will be connected to a LED screen.
3. Emulator— Control the two modes baseball and basketball. In addition, it could possibly be controlled by a state machine.
4. Big switches— This will help people who are unable to click on small buttons. The switches will be a tool to switch from both modes.
5. Backyard Sports baseball bat— This bat will be a template for the game.
